The pectate lyase enzymes are obtained from Bacillus agaradhaerens (BA), Bacillus licheniformis (BL), Bacillus halodurans (BH) and other Bacillus species. The pectate lyase enzymes can be used for degrading pectin, pectate and polygalacturonides. They can be used in degrading pectin, pectate and polygalacturonides. They can be used in of fabrics, for improving he properties of callulosic fibres, yarn, woven or non-woven fabric, for the degradation of plant material (e.g. recycled waste paper, mechanical paper-making pulps or fibres subjected to a retting process, for preparing animal feed or for processing wine or juice. DNA encoding the enzymes can also be used for the production of

AA112. This bacterium encodes a mannanse enzyme (also known as mannan endo-1,4-beta-mannosidase, beta-mannanase, or endo-1,4-mannanase). The mannanase hydrolyses galactomannans. Specifically, mannanases hydrolyse 1,4-beta-D-mannosidic linkages in mannans, galactomannans, palactomannans, preparations containing it, are used to improve properties of cellulosic or synthetic fibres, yarn or (non)woven fabrics (removal of mannan-based

10;
sizes or printing pastes). They are also used to degrade or modify plant materials (particularly recycled waste paper, paper making pulps, or material containing quar or locust bean gums (thickeners), or to reduce viscosity of mannan-containing foods or feeds). The mannanases are also used to process coffee extracts (to inhibit gel formation); in cleaning compositions (for machine washing of fabrics, as hard-surface cleaning compositions (for shine washing, also in oral, dental, contact lens or body-care compositions) where they remove mannan-containing soils and prevent binding of some soils to cellulosics; and in fabric softeners. They can also be used in oil well drilling to fracture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300

                                                                                                                                           following bacterium;
                                                                                                                         The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30c n-alkanes. This sequence represents a fragment of the 16s rDNA gene from the microbe of the invention,
                          Monitoring of oil contamination of sea water - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to Proteobacteria, gamma subdivision, etc. 2

                                                                                                                                                                                                                                                      The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 16S rDNA gene from the microbe of the invention, isolate Wf-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  299
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             344

```

```
The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum: (2) it is a Gram-negative bacterium; assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10.30c n-alkanes. This sequence represents a fragment of the 16s rDNA gene from the microbe of the invention, isolate Wf-2.
                                                                                                                                                                                                                     Monitoring of oil contamination of sea water - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to

The invention relates to a new method for the production of taxane and paclitaxel compounds that comprises culturing bacteria isolated from a plant species of Taxus or bacteria produced by mutating the isolated bacteria. The methods can be used for the production of taxanes such as paclitaxel, 10-deacetylcephalomannine, 7-epitaxol, 10-deacetyl-7-epitaxol, 7-epicephalomannine, baccatin III, 10-deacetyl-baccatin III, cephalomannine, taxanine, delta-barcoploxy taxagifine, 9-acetyloxy taxusin, 9-hydroxy taxane and paclitaxel compounds can be used for the treatment of cancers. The methods can provide for the production of taxanes and paclitaxel at a concentration of 1-25 mu g/l.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ctccgagtctgggataactttccgaaaggaaagctaataccggata-----gtcctgt 156

strain DSM 8721. This is a reference standard for isolation o
closely related strains (more than 92% sequence identity, or
preferately more than 93% identity of IGS ribosomal DNA) which
produce thermostable alkaline endo-1,4-beta-D-xylanase, which
is useful in paper production and pulp bleaching. The strain
itself produces such a xylanase.

```
his sequence represents the 16S rRNA gene of Pseudomonas cepacia
train KKOl. Fragments of the nucleic acid sequence (see T01872-T02316)
re useful as primers and probes for the specific detection of P.cepacia
train KKOl.

The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently a similates at least one of 10-30C n-alkanes. This sequence represents isolate TE-9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Monitoring of oil contamination of sea water - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to Proteobacteria, gamma subdivision, etc. 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         239

The invention relates to a method for monitoring oil contamination of sea water by detecting, in the sea water, a microbe having the following properties: (1) it has no flagellum; (2) it is a Gram-negative bacterium; (3) it belongs to Proteobacteria, gamma subdivision; (4) it cannot assimilate glucose as a single carbon source; and (5) it efficiently assimilates at least one of 10-30C n-alkanes. This sequence represents a fragment of the 16S rDNA gene from the microbe of the invention, isolate K2-1.
                                                           Monitoring of oil contamination of sea water - where oil contamination is evaluated by detection of a microbe having properties from e.g. having no flagellum, being a Gram-negative bacterium, belonging to Proteobacteria, gamma subdivision, etc.?

Novel bacterial strain ADP (ATCC 55464), isolated from atrazine-contaminated soil, is capable of degrading s-triazine cpds., including atrazine. In an attempt to identify the strain, the 165 ribosomal RNA sequence (T18760) was compared to that of Escherichia coli (T18759), Pseudomonas citronellolis ATCC 15674 (T18761-63), and Pseudomonas aeruginosa (T18764), Pseudomonas testosteroni (T18765) and Pseudomonas cepacia (T18766). It was concluded that ADP is closely related to, but distinct from, P. citronellolis and P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Biologically pure culture of atrazine-degrading Pseudomonas - unto detoxify atrazine, e.g. in soil, at a wide variety of concus

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, App
